Fab Op Report
For week ending Thursday, 2019-04-25

Created 2019-04-26

Purpose

The purpose of this weekly write-up is to report the Fab Op Metric, a single number that encapsulates the most important areas of Adafruit's manufacturing division; that is, work order scheduling, quality, rework success rate, and in-stock percentage. The Fab Op Metric is inspired by the well-known Overall Equipment Effectiveness Metric.
Weekly Fab Op Metric

*A week begins on Friday and ends on Thursday. All of the averages in this report are taken over the last 53 weeks (so about one year).

Metric	Week Ending 2019-04-25	Avg	Weight	Above Or Below The Avg
Availability	124.0%	99.4%	15.0%	ABOVE
Quality	99.5%	99.4%	20.0%	ABOVE
Rework	0.0%	50.3%	5.0%	below
In-Stock	96.1%	94.6%	60.0%	ABOVE
Fab Op Metric	96.1%	94.1%		ABOVE

Keep scrolling for a bird's-eye-view of these metrics over time.

Week Ending

Work Order Overview

At the time of this writing, the data shows the following work order counts:

Wo Status	Work Order Counts
Completed	5,930
Pending	319
Active	189
Total	6,438

CSV Data

Here's where you can view a CSV which contains the data used in this report, and below are some notes on each worksheet.
- Fab Op Table: The same table shown at the top of this report, for reference
- Completed: All WOs currently marked as "Completed"
- Active: All WOs currently marked as "Active"
- Pending: All WOs currently marked as "Pending"
- Completed WOs with null dates: WOs currently marked as "Completed", but whose "Date Active" or "Date Completed" is null or equal to zero
- Skus Used For In-Stock Metric: The skus this report uses in the calculation of the In-Stock Metric
- Rejection data: All parts which incurred rejections for the current week ending
- Current Reworks: All attempted reworks for the current week ending

Availability

*Availability = 50% * (WOs completed / scheduled) + 50% * (WOs completed / active)
†Excludes outsourced WOs

This metric amounted to 124.0%, higher the average of 99.4%. x25 work orders were scheduled, x25 went active, and x31 were completed. The chart below shows these counts over time along with the Availability Metric.
Quality

This metric arrived at 99.5%, about equal to the average of 99.4%. On a step-by-step basis, all rejections counts were below or at their averages.

To see all rejections for the current week ending, check out the workbook link at the top of this report, and navigate to the "Rejection Data" worksheet.

Zooming in now to the Fabrication step, we have Machine Yield, which came to 100.0%, above the average of 98.6%. Below is a chart showing the Quality Metric alongside Machine Yield.

4

Reworks

*Reworks = Successful Reworks / Total Reworks Attempted

This metric achieved 0.0%, short of the average of 50.3%. x6 units were attempted and x0 were successful.

To see all reworks for the current week ending, check out the workbook link at the top of this report, and navigate to the "Current Reworks" worksheet. Below we have a chart showing the count of reworks over time along with the Rework Metric.

In-Stock

*Visible in-stock percentage of all currently working skus that have a bom type equal to "pnp".

The unique sku count is currently x431. To see the skus which are used in this metric, check out the workbook link at the top of this report, and navigate to the worksheet titled "Skus Used For In-Stock Metric".

This metric arrived at 96.1%, passing the average of 94.6%, and below is a chart showing this metric over time.

Note that if you compare this metric to the one found in the Zero Stock Report, the two may not match. This is because the Zero Stock Report shows a snapshot while the report shows over time.

Elapsed Times For Work Orders

This section contains a standalone set of metrics which are not included in the calculation of the Fab Op Metric. The table below shows the average time in days that it takes for a single work order to go from period to period.

	Week Ending Apr 25, 2019	6 Month Avg	Shorter Or Longer Than Avg?
Created To Scheduled	49	54	Shorter
Scheduled To Active	1	1	About Equal
Active To Completed	41	37	Longer

State of the Fruit Blurb

Copy/paste the blurb below into your SOTF notes :)

fab ops!
-availability: 124.0% (last week: 124.6%)
-quality: 99.5% (last week: 99.4%)
-rework: 0.0% (last week: 75.0%)
-in-stock: 96.1% (last week: 96.2%)
-overall: 96.1% (last week: 100.1%, goal = 94.1%)
